I participated in study tour of 2 days on June 20 and June 21. This tour is very valuable, really fun and I gathered more information about the Fukushima. In first day we visit Fukushima agricultural technology centre. They give the introduction about the agricultural centre and screening of food for radiation. And also they introduced to original foods produced by the prefecture. We learned safety of Fukushima Prefecture products by visit of Agricultural Technology Centre.

Then we visited Yamatogawa sake Brewery. It is Brewery tour and they give explanation about Aizu electronic company' s efforts. We can learn about power generation using natural energy and efforts to supply electric/heat energy. Then we will visit the NPO Kitakata Green Tourism Centre and it was a different experience for us.

In second day morning we had a nice experience in farm stay locations. Working in farm , cooking Japanese foods living with a farming family, their cultural things, language, different foods and drinks will be memorable things in my Japan life.

Then we paint our own Akabeko, experiencing the traditional craft products of Fukushima and visited the Tsurugajo castle and learnt history of castle. Finally we visited the IIE. We could learn about a project that began to help locals recover from the disaster.

We participate in this study tour and spend cored two days, and through this tour we enjoyed a lot and make new foreign friends. I think that it becomes memorable memory throughout my life.
